

The APQS Bliss Drive System will have you floating on air

Bliss – it's the only word we could find that could possibly describe that "floating on air" feeling you'll get when you quilt with our exclusive drive system.

The Bliss Drive System dramatically reduces friction and increases ease of movement. Combine this with an APQS sewing head handcrafted from aircraft aluminum and you'll feel like you're effortlessly gliding across your quilt.

To create the Bliss Drive System, our engineers used cutting-edge technology that has revolutionized everything from aerospace engineering to medical instruments and robotics. You won't find anything like this in the industry!

Specially designed horizontal wheels on the sewing head and roller bearings on the table rails eliminate binding and resistance. Quilt artists, longarm professionals and hobby quilters alike will appreciate the increased accuracy and control you'll gain with the Bliss Drive System. The Bliss aluminum alloy table rails are engineered to eliminate the need for truss support.

Our exclusive Bliss Drive System is easy to maintain. Unlike other channel systems on the market, the APQS rail profile prevents dirt and thread buildup so you can spend more time quilting and less time cleaning. No adjustments are needed – all you have to do is quilt!

This technology is available for Millennium, Freedom SR, Lucey and Lenni sewing heads.
