

Power fabric advance – stop cranking and start quilting

The APQS Power Fabric Advance provides “hands-free” operation when you are ready to advance your quilt.

The motor mounts on the pick-up roller of Millennium and Freedom SR tables so that your quilt receives consistent tension as it advances. This reduces the chance for pleats and puckers in your backing fabric. You can control how your quilt advances from the foot pedal or from the motor itself, and the foot pedal lets you adjust your quilt without leaving your work area.

The APQS pressure-sensitive braking system provides infinite adjustment settings to protect delicate quilt tops from over-stretching – no ratchets to accidentally “catch” when advancing the quilt.
