

## APQS Quilt Glide enhances your ability to create stunning detail in your quilts

For years, longarm quilters have been trying to make detail quilting easier without sacrificing the benefits of stitch regulation. APQS has found a way!

The Quilt Glide gives you the slick, fluid motion you like when stitching in manual mode, and simultaneously keeps the stitch regulator engaged to give you consistent stitches, even when moving slowly for detail quilting.

Available on the Millennium and Freedom SR machines, the Quilt Glide feature combines manual sewing mode and stitch regulation mode together to give you accuracy and consistency without that “jerky” feeling that can happen when trying to do detail quilting in regulator mode alone.
