

Dream Big Dream Catcher

Top left picture: This just shows the placement of the feather pieces that will actually be behind this colored panel. (DO NOT FUSE TO PRETTY SIDE OF FABRIC.) The bottom picture shows you exactly what it will look like. You want to start the base of the feather in the orange center section of the flower. Each feather piece will be separated with a space so you can cut each piece individually. I worked on the diagonal of the panel to have the most room for placement and to be able to get the greenish color in the corners. Place all feather pieces on panel before you fuse. You want to make sure to fidget with them to get them all on before you commit.

Backside of panel.

Front side of panel with the pieces fused on the backside.

Number each piece. You need six feathers for the bed runner, 4 in one direction and two center feathers in other direction. See directions. Cut spines from leftover fabric. I noticed that when I fused the Pellon 805 Wonder Under Light to the digital print fabric that it was hard to peel off. Let it cool completely before you attempt to peel off paper back. It works even better if you let them sit overnight.
